

# System for Monitoring Timber Harvesting (Simex)

## Mapping logging in PARÁ STATE August 2022 to July 2023

Between August 2022 and July 2023, 52,105 hectares of logging were detected in Pará, of which 21,832 hectares (42%) were carried out without authorization. The authorized area represented 58% of the total mapped, with 30,274 hectares. As for unauthorized activity, most of it was identified within registered rural properties (15,611 hectares or 72% of the total).

### UNAUTHORIZED logging by LAND CATEGORY

- Registered rural properties
- Agrarian reform settlements
- Non-assigned lands
- Lacking land titles
- Indigenous lands

### ASSESSMENT OF LEGALITY

The data used to verify the legality of management plans in the state was obtained from Simlam-Pará (the State Environment Secretariat's Environmental Monitoring and Licensing System), the Brazilian Forest Service and IdeflorBio. As for private areas, Simex assesses the consistency of the authorizations issued by the Secretariat, by cross-referencing the information contained in these documents with satellite images. In other areas, such as forests under concession, the system only verifies the existence of authorization for any exploitation detected.

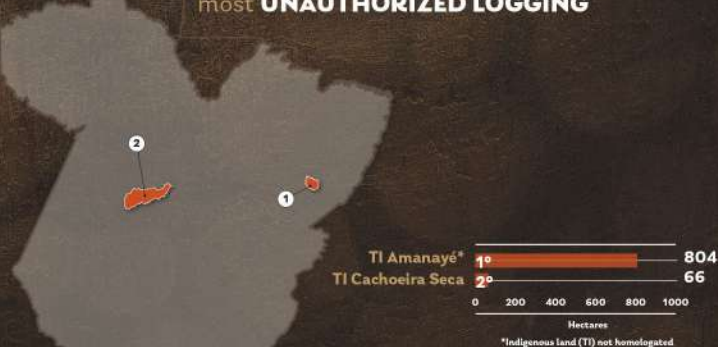

#### ROUNDED VALUES

The values presented here follow the rules of rounding. Therefore, summations may result in small differences.

#### DATA SOURCES

Registered rural properties (INCRA and SICAR - Terra Legal Program, SIGEF, SNCI and CAR), Agrarian reform settlements (INCRA and SFB), Non-assigned lands (INCRA and SFB), Indigenous lands (FUNAI) and Lacking land titles (polygons that do not overlap any of the previous categories).
